To the RIGHT HONOURABLE

THOMAS,

Earl of *Pembroke* and *Montgomery*,

Baron Herbert *of* Cardiff, *Baron* Roſs *of* Kendal, Parr, Fitzhugh, Marmion, *St.* Quintin, *and* Herbert *of* Shurland; *Knight of the Moſt Noble Order of the Garter, one of the Governours of the* Charter-houſe; *Fellow of the* Royal Society; *Lord Lieutenant of the County of* Wilts; *and one of His Majeſty's Moſt Honourable Privy Council.*

MOST NOBLE LORD,

WE ſhould not have preſum'd to lay this humble Performance at your Feet, had not your Candour and Humanity been as remarkable, as is your familiar Acquaintance with all Kinds of polite Literature; you having alſo been the great Patron of whatſoever tends to the Improvement of good Letters and uſeful Knowledge.

YOUR Lordſhip's great Abilities, and unqueſtionable Integrity, have evidently appeared in that you have

ſuſtain'd

ſuſtain'd the moſt important Offices of the *Britiſh State* with univerſal Applauſe; and in which you have always behaved with that Moderation and Affability of Manners, which are ſo conſpicuous through all Parts of your Life.

YOUR Lordſhip's ſuperior Taſte, in all the valuable Branches of Learning, is eminently apparent in that vaſt and curious Collection of the choiceſt Books, and rareſt Pieces of Antiquity, with which you have not only ſtored your Library, but likewiſe inrich'd your Mind, with the Knowledge of the moſt abſtruſe Parts of ſolid Learning: But to enumerate every Thing that is great and good, which adorns you would be to give a Hiſtory of all the Sciences, and a Detail of the whole Syſtem of Virtues.

IT was our Reſolution to have ſaid nothing, that look'd like Praiſe; but we found it impoſſible to enter upon ſuch a pleaſant Subject, as is your Lordſhip's Character, without obſerving ſome of its Beauties, tho' at the ſame Time we were not unapprehenſive of Exciting your Lordſhip's Reſentment, in Preſuming to beſtow any Encomiums on you, tho' never ſo juſt.

WE do not addreſs this Work to your Lordſhip, as if we thought it were capable of being of any Service to your ſelf. It cannot be thought you can be unacquainted with the Meaning of Words and Terms of Arts, who are ſo converſant with the Arts themſelves: But as you have always been a great Patron and Encourager of Learning; ſo we hope, that if this our Work has any Share of Merit, you will be pleaſed to honour it by a favourable Acceptance. And no longer to treſpaſs upon your Lordſhip's Patience, we beg leave to offer our hearty Wiſhes, That you may long continue the great Ornament of the *Britiſh* Nation, and that to lateſt Poſterity your Noble Family may continue to follow your great Example in the Paths of Virtue, and in the Service of their King and Country. And permit us to ſubſcribe ourſelves,

Your Lordſhip's Moſt Humble

And Devoted Servants,

GEORGE GORDON,
NAT. BAILEY.

DICTIONARY;

An Interpreter of Hard and Technical WORDS.

A

A *Roman* Character, *A a* Italick, 𝔄 a old *Engliſh*, A *α Greek*, ℵ *Hebrew*, are the firſt Letters of the Alphabet; and in all Languages, ancient and modern, the Character appropriated to the ſame Sound is the firſt Letter, except in the *Abaſſine*.

A [among the *Ancients*] was a numeral Letter, and ſignified 500.

$\overline{A}$ or $\overline{a}$, ſignifies 5000.

A [among the *Romans*] was uſed as an Abbreviation of the Word *Abſolvo*, i.e. *I acquit*. The Judges being wont to give their Sentence upon Perſons, by caſting Tables into a Box or Urn, on which Tables were the Letters A, C or N L. If they acquitted the Perſon try'd, they caſt into the Urn a Table with the Letter A marked on it; if they condemned, with the Letter C, for *Condemno*, i. e. *I condemn*; if the Matter was hard to be determined, with the Letters N L, for *Non liquet*, i. e. *It does not appear plain*. Hence *Cicero* calls the Letter A *Litera ſalutaris*, i.e. *the ſaving Letter*. A was alſo uſed by the *Romans*, as the firſt of the *Litteræ Nundinales*, in Imitation of which, the *Dominical Letters* were introduced; and A is alſo uſed as the firſt of the *Dominical Letters* in our *Julian Kalendar*.

A α Ἄλφα, and Ω or ω Ὦμέγα, i. e. great O [*Hieroglyphically*] being the firſt and laſt Letters of the *Greek* Alphabet, are uſed in the Revelation of St. *John*, to ſignify the *firſt* and the *laſt*.

A [as an *Abbreviation*] is uſed for *Anno* in the Year, and *Artium* of Arts, as *Anno Domini*, in the Year of our Lord, *Anno Mundi*, in the Year of the World, A B, *Artium Baccalaureus*, Batchelor of Arts.

$\overline{A}$ or $\overline{A\,A}$ [with *Phyſicians*] is uſed in Preſcriptions for *Ana*, and denotes an equal Portion of divers Ingredients, either in reſpect of Weight or Meaſure; alſo $\overline{A}$ or $\overline{AA}$. Æ.P. denotes ſimply equal Parts of the Ingredients therein mentioned.

AAA [with *Chymiſts*] is ſometimes uſed to ſignify *Amalgama* or *Amalgamation*.

A B

A B, at the Beginning of *Engliſh Saxon* Names, is generally a Contraction of Abbot, *i. e.* an *Abbot* or *Abby*; ſo that as to the Names of Places, it may be generally concluded, that the Place belonged to a Monaſtery elſewhere, or that there was one there.

A'BACOT [*Incert. Etym.*] a Royal Cap of State made in the ſhape of two Crowns, anciently worn by the Kings of *England*.

ABA'CTORS [*Abactores*, L.] thoſe who drive away or ſteal Cattle in Herds, or great Numbers at once, in Diſtinction from thoſe that ſteal only a Sheep or two.

A'BACUS [Ἄβαξ, Gen. of Ἄβαξ, *Gr.* which ſome derive from אבך, *Heb.* to be elevated or raiſed, and thence take it to ſignify a high Shelf, *&c.*] it was uſed among the Ancients for a Cupboard or Buffet.

ABACUS [Ἄβαξ, Gr.] a Counting-Table anciently uſed in Calculations: This was ſometimes a Board cover'd with Sand, Duſt, *&c.* ſifted evenly upon it, on which Geometricians, *&c.* uſed to draw their Schemes.

ABACUS *Pythagoricus* [i. e. *Pythagoras's* Table] a Table of Numbers contrived for the more eaſy learning the Principles of Arithmetick, and ſuppoſed to be the Multiplication Table, and thence it has been uſed to ſignify an Alphabet or A B C.

ABACUS [in *Architecture*] is the uppermoſt Member or Capital of a Column, which ſerves as a Sort of Crowning both to the Capital and Column, tho' ſome erroneouſly make it to be the Capital itſelf.

The ABACUS [according to *Vitruvius*] was originally deſigned to repreſent a ſquare Tile laid over an Urn or Basket. The Original or Riſe of this firſt regular Order of Architecture is ſaid to be as follows. An old Woman of *Athens* having placed a Basket covered with a Tile over the Root of an Acanthus [*Bear's Foot*] the Plant ſhooting forth the following Spring, encompaſſed the Basket all round, till having met the Tile, it curled back in a kind of Scrolls, which being obſerv'd by an ingenious Sculptor, he formed a Capital upon this Plan; repreſenting the Tile by the *Abacus*, the Basket by the Vaſe or Body of the Capital, and the Leaves by the Volutes.

The ABACUS is ſomething different in different Orders. It is a flat ſquare Member in the *Tuſcan*, *Dorick*, and ancient *Ionick* Orders. In the richer Orders, the *Corinthian* and Compoſit it loſes its native Form; having its four Sides or Faces arch'd or cut inward, with ſome Ornament as a Roſe, ſome other Flower, a Fiſh's Tail, *&c.*

But there are other Liberties taken in the *Abacus*, by ſeveral Architects. Some make it a perfect Ogee in the *Ionick*, and crown it with a Fillet. In the *Dorick*, ſome place a Cymatium over it, and ſo do not make it the uppermoſt Member; In the *Tuſcan* Order, where it is the largeſt and moſt maſſive, and takes up one third Part of the whole Capital; they ſometimes call it the *Die* of the Capital, and *Scamozzi* uſes the Name *Abacus*, for a Concave moulding in the Capital of the *Tuſcan* Pedeſtal.

A B

ACCIDENT [with *Logicians*] is taken in a three-fold Senſe.

1. In Oppoſition to the Eſſence of a Thing, for whatever does not really belong to a Thing, but only caſually; as the Clothes a Perſon wears, the Money in his Pocket, &c.

2. Many Qualities are termed Accidents, in Contradiſtinction to the eſſential Properties of any Subject; becauſe they are there not eſſentially, but accidentally. This the Schoolmen call *accidens prædicabile*, and it implies a common Quality, which may or may not be in any Subject; as Whiteneſs in a Wall, &c.

3. A Thing is called an ACCIDENT in Oppoſition to Subſtance, when it is in its Eſſence or Nature to ſubſiſt in, inhere, or cleave to ſome Subſtance, and cannot be alone. This they alſo call *accidens prædicamentale*, and in this Senſe the laſt nine Predicaments are called Accidents or it is thus with all Qualities whatſoever.

A Thing is alſo frequently ſtiled an *Accident*, in Reference to its Cauſe, or at leaſt as to our Knowledge of it, and by this an Effect either caſually produced, or which appears to have been ſo to us, is commonly underſtood.

Common ACCIDENTS [with *Logicians*] is the fifth of the univerſal Ideas, and are when the Object is a true Mode, which may be ſeparated at leaſt by the Mind, from the Thing of which it is ſaid to be an Accident, and yet the Idea of that Thing ſhall not be deſtroyed; as *round*, *hard*, *juſt*, *prudent*, &c.

Predicamental ACCIDENT [with *Logicians*] is when it is in its Eſſence or Nature to ſubſiſt in, inhere or cleave to ſome Subſtance, and cannot be alone.

ACCIDENT [with *Phyſicians*] is ſuch as does not flow immediately from the firſt Cauſe; but from caſual Interpoſitions: Some uſe the Expreſſion in much the ſame Senſe as Symptom.

Æ'RA is ſaid originally to have ſignified a Number ſtamp'd on Money, to denote the current Value of it; and if ſo, it may come from *Æs* Braſs, from which Plural *Æra* came the feminine ſingular *Æra*, and that becauſe they put the Word *Æra* to each Particular of an Account, as we now do *Item*, or elſe becauſe the *Romans* anciently marked down the Number of Years in Tables with little Braſs Nails; and ſo in Reference to the laſt mentioned Cuſtom the Word *Æra* came to ſignify the ſame with *Epocha*, *viz.* a certain Time or Date from whence to begin the new Year; or ſome particular Way of reckoning Time and Years.

And in this Senſe the Word is thought to be compoſed of theſe initial Letters A. E. R. A. for *Annus erat regni Auguſti*, the *Spaniards* having began their *Æra* from his Reign.

Reign. There are many *Æra's* uſed by Chronologers, the moſt eminent of which are

1. The *Æra* of the Creation of the World, which began, according to the *Julian* Account, on the twenty fourth Day of the Month of *October*, which ſome place 3951 Years before the Birth of Chriſt, others reckon 3983, and *Kepler* 3993.

Others ſay, that *Æſculapius* was a poor Infant, whom his cruel Parents being aſham'd to own, laid in a Wood near *Epidaurus*, and was fortunately found by ſome Huntſmen, who obſerving a lambent Flame about its Head, they accounting it a Prognoſtick that the Child would prove in Time an eminent Perſon, put him to Nurſe to a Woman named *Trigo*. Being grown up, he ſtudied Phyſick under *Chiron* the *Centaur*, and proved ſo great a Proficient in the Art, that he obtained the Stile of the God of Phyſick.

He had a Temple built to him in a City of the *Romans* named *Tetrapolis*, which was enrich'd with noble Preſents, offered by Perſons, who aſcrib'd their Recovery out of dangerous Sickneſſes to *Æſculapius*. And the Walls of this Temple were hung, and in a Manner hid, with Memorials of Miracles done by him.

The *Grecians* celebrated Plays to him every five Years, nine Days after the *Iſthmean* Games in the Woods near the City *Epidaurus*. *Æſculapius* was worſhipped under the Form of a Serpent by the *Romans*, who, when the City of *Rome* was grievouſly afflicted with the Plague, ſent Ambaſſadors to *Epidaurus* to fetch the God *Æſculapius* to their Aſſiſtance, and they ſay the Serpent that was worſhipped there for *Æſculapius*, follow'd the Ambaſſadors of its own Accord to the Ship that carried it to *Rome*. The *Romans* built a Temple for it in the Iſle call'd *Tiberina*. Sick People us'd to lye in this Temple for Recovery of their Health, and oftentimes, when they found themſelves no better, revil'd *Æſculapius*.

To *Æſculapius* were dedicated the Serpent, the Goat, the Raven, the Dog and the Dragon.

The Ancients painted him in the Form of an old Man with a long Beard, having on his Head a Crown made of the Branch of a Bay-tree, and in his Hand a Staff full of Knots, about which a Serpent twiſted itſelf, and at his Feet was either a Dog or an Owl.

Theſe Things were deſign'd as Hieroglyphicks of the Qualities of a good Phyſician, intimating that he ought to be as cunning as a Serpent, as vigilant as a Dog, as experienc'd as a Perſon of great Age, to be capable of managing a Concern ſo difficult as Phyſick is.

It is reported that *Dionyſius* the *Sicilian* Tyrant coming into a Temple, where the Statues of *Apollo* and *Æſculapius* were ſtanding together, *Æſculapius* having a grave Beard of Maſſy Gold, he took away the Beard, colouring his Sacrilege by putting a Jeſt upon *Æſculapius*, ſaying, it was not juſt that he ſhould have a Beard, when *Apollo* his Father had none.

Dr. *Hook* calls that Medium or Fluid Body, in which all other Bodies do as it were ſwim and move, *Æther*. But this ſome diſapprove of, as ſavouring too much of the *Carteſian Doctrine* of an abſolute *Plenum*, which has been proved an Impoſſibility by many infallible Reaſons and Experiments. Therefore as we call the *Medium*, in which we breathe and live, the *Air*, by which we mean an elaſtic, fluid Body, which either has very large Interſtices devoid of all Matter, or elſe is in Part fill'd with a Fluid, very eaſily moving out of them by Compreſſion, and returning as readily into them again when that Compreſſion is taken off; ſo we alſo do agree to call that finer Fluid *Æther* (if it be a Body) which is extended round our Air and Atmoſphere, above it and beyond it up to the Planets, or to an indefinite Diſtance, tho' we ſcarce well underſtand what we mean by the Word *Æther*.

Infancy or *Childhood*, extends from the Birth to the fourteenth Year.

Youth, or the Age of Puberty commences at fourteen, and ends at about twenty-five.

Manhood, terminates at fifty.

Old Age commences from fifty, and extends till the Time of Death.

AGE [in *Law*] is uſed to ſignify thoſe ſpecial Times which enable Men and Women to do that, which they could not do before, being ſuppoſed to want Judgment. Thus a Man may take an Oath of Allegiance at twelve Years of Age, and is at Age of Diſcretion at fourteen, and at full Age at twenty-one.

AGE *Prier* [*Common Law*] is when an Action is brought againſt one that is under Age for Lands coming to him by Deſcent, who may then move the Court, and pray that the Action may be ſtaid till he is of full Age, which is moſt commonly allowed; but in the *Civil Law* it is otherwiſe, for that obliges them to anſwer by their Tutors or Guardians.

Old AGE [*Hieroglyphically*] was repreſented by a Raven, becauſe that Bird lives a great while, and therefore to repreſent a Man dead in a very Old Age, the *Egyptians* painted a dead Raven.

AGES [*of the World*] are certain Periods or Limits of Time, which for the Convenience of Chronology and Hiſtory are diſtinguiſhed, by thoſe Accidents and Revolutions that have happened in the World; the Generality of Chronologers agree in making ſeven Ages or Periods.

I. From the Creation of the Word to *Noah*'s Flood which contains 1656 Years.

II. From *Noah*'s Flood to the Birth of *Abraham*, which contains 382 Years.

III. From *Abraham*'s Birth to the Departure of *Moſes* and the Children of *Iſrael* out of *Egypt* which contains 550 Years.

IV. From the *Iſraelites* going out of *Egypt* to the Building of *Solomon*'s Temple, which contains 479 Years.

V. From the laying the Foundation of the Temple to the Reign of *Cyrus* in *Babylon*, which contains 493 Years.

VI. From the Reign of *Cyrus* to the Coming of Chriſt, which contains 538 Years.

VII. From the Birth of Chriſt to the preſent Year 1730, the whole from the Creation of the World, to this Year 1731, makes 5783 Years.

The Chronologers do pretty generally agree, as to the dividing the Time from the Creation into ſeven Periods or Ages, yet they differ as to the Time contained in theſe Periods: ſo that *Chevereau* in his Hiſtory of the World reckons more than thirty different Opinions.

Again, the Poets diſtinguiſh the Age of the World into four Periods: the *Golden*, the *Silver*, the *Brazen*, and the *Iron* Age; the *Golden Age*, was in the Reign of *Saturn*; the *Silver*, that of the Beginning of *Jupiter*; the *Brazen Age*, was when Men began to depart from their Primitive Simplicity and Honeſty, and to fall to Injuſtice and Rapine; and the *Iron Age*, when they grew not only covetous and unjuſt, but added Cruelty, Savageneſs, and Barbarities to their Vices.

It is not improbable, but that this Notion of the four Ages was taken from the Hiſtory of the Golden Image, ſeen by *Nebuchadnezzar* in a Dream, mentioned in *Daniel*, by which the firſt Monarchy was denoted the *Golden* one, the ſecond *Silver*, the third *Brazen*, and the fourth *Iron*, and that the *Greeks*, who of a long Time had Commerce with the *Egyptians*, had it from them.

AIR [*Aer*, L. of Ἀὴρ Gr. of τῦ ἀεὶ ῥεῖν, becauſe it is always flowing, or as others from Ἄημι to breathe, or as others ſay of אור *Heb.* Light] is generally underſtood to be that Fluid in which we breathe and the Earth is encloſed, and as it were wrapped up.

AIR is found to have theſe Six Properties following.

1. It is liquid, and cannot be congeal'd like Water.
2. It is much lighter than Water, but yet it is not without its Gravity.
3. It is diaphanous, that is, it tranſmits the Light.
4. It can eaſily be condens'd and rarified.
5. It has an elaſtick Force.
6. It is neceſſary for Flame and Reſpiration.

I. It is much more liquid than Water is, and cannot be congeal'd, and that for the Reaſons following.

1. Becauſe it ſeems to have Pores much larger, full of finer Matter, of a very quick Motion, whereby the Particles of Air are continually driven about, as it appears by this Experiment, that if Air be pent up in a Veſſel it is eaſily condenſed; whereas no Perſon yet, by any Invention, has been able to condenſe Water.

2. The Particles of Air are very fine and branched, ſo that they leave Interſtices between one another, and can never be formed into a compact Body.

II. Water has been prov'd by Experiment to be 840 Times heavier than Air, from whence it will follow, that a certain Bulk of Air contains in it 840 times leſs homogeneous Matter than an equal Bulk of Water does; and this is the Reaſon why *Air* may be condens'd, but not *Water*.

III. The Air is *Diaphanous*, becauſe having very wide Pores, and ſeparable Parts, it admits the Matter whereof Light conſiſts through right Lines. And hence it is, that not only the Sun and the Planets ſhine or reflect their Light upon us, but alſo the fixt Stars are ſeen by us at an immenſe Diſtance. But as deep Water does not tranſmit all the Rays which fall upon it, becauſe the Series of Light is interrupted by the Motion of the watery Particles: So many of the Rays, which fall upon this prodigious Bulk of *Air* over us, muſt needs be broken off and intercepted before they reach us; which probably may be the Cauſe, that where the Sky is very clear, it is not quite tranſparent, but appears of a more blue and wateriſh Colour

IV. AIR is condenſed and rarified, becauſe it conſiſting of branchy Particles, thoſe Particles are eaſily ſcatter'd by an extraordinary quick Motion, which is called *Rarifaction*.

Again, they are eaſily thruſt into a leſs Compaſs, while their Branches are driven together, and cloſe one with another, and thereby cruſh out the liquid Matter which lay between them; and this is called *Condenſation*.

There are a Multitude of Experiments to prove this; as there are a ſort of Guns, into which ſuch a Quantity of Air may be forc'd, as to ſhoot out a Leaden Bullet with great Violence.

V. That the Air has an Elaſtick Force; that is, that it has a Power to return to the ſame State, and re-occupy the ſame Space which it filled before, when ever the Force that cruſhed it into a narrower Compaſs is removed, the beforementioned Experiment does demonſtrate.

VI. *That* AIR *is neceſſary for Flame or Reſpiration*. Without Air, Flame and Fire go out, and Air ſeems to have a nitrous or ſulphurous Matter in it, that the Air which lies upon ſo many Plants, Animals and Minerals, upon which the Heat of the Sun continually operates and extracts a good Part of them, muſt needs carry away with it innumerable Particles of Sulphur and volatile Salts, wherewith Things abound, as chymical Experiments demonſtrate.

The River *Euphrates* ran thro' the middle of the City, the two Shores being joyned by a Bridge of ſtupendous Architecture: Some Authors write, that the City, when in its greateſt Grandeur, was in Compaſs 46 Miles. The Walls were built by Queen *Semiramis* ſo large and high, that ſome write they were 200, others 250, and others 300 Feet high; but the moſt common receiv'd Meaſure is, that they were fifty Cubits high, and ſo broad that three Chariots might go upon them without Danger. *Diodorus Siculus* writes, that they were 300 or 350 Stadia in Compaſs, that is above twenty-two *Engliſh* Miles, and five Stadia high, having pleaſant Gardens on them.

BA'CCHUS, ſome derive *Bacchus* of בר a Son, and חוז, *Chus*, q. d. the Son of *Chus*, and ſo they will have it that *Bacchus* and *Nimrod* are the ſame Perſons; but (according to the *Heathen* Theogony, he was the Son of *Jupiter*, and the Nymph *Semele*. The Poets relate that *Juno* being acquainted with the Amours of her Husband *Jupiter*, out of Revenge to the Rival of her Bed, diſguis'd herſelf, and came to *Semele* in the Form and Habit of an old Woman, telling her that it was for her Honour, that *Jupiter* ſhould viſit her in the ſame manner that he did

his Wife *Juno*, i. e. in his Glory and Majesty with his Thunder-bolts in his Hand, advising her the next Time he came to desire this Favour of him. She did so, *Jupiter* granted her Request, but it prov'd fatal to her, she being kill'd by that means according to *Juno*'s Desire. But *Jupiter* immediately separated the Child from his dead Mother, and inserted him into his Thigh, doing thereby the Office of a Mother, till the Time was expired that he should be born, and then committed him to *Silenus* and the Nymphs, to be brought up by them, or as others say, to *Ceres*; for which good Service they are fabled to have been received up into Heaven, and to have been turn'd into the Stars called *Hyades*.

He is said to have been the Inventor of the Use of Wine, which he giving the *Indians* to drink, they at first thought he had given them Poison, because it not only made them drunk, but mad too.

He was usually painted with a Mitre upon his Head, or a Garland of Roses, or else with a bald Pate, which was to intimate the Effect of the Excess of Wine. In the one Hand he held a Sickle, in the other a Pitcher: He was always represented young, because the moderate Use of Wine warms the Blood, and keeps the Body in a youthful Strength and Colour.

His Chariot was drawn by Tygers, his Habit was the Skin of a Deer, his Scepter was a Lance adorned with Branches of Ivy, and of the Vine.

His Temple was next to that of *Minerva*, the Intent of which was to intimate how useful Wine is to revive the Spirits, and assist the Fancy in Invention; and for that Reason the Ancients sacrificed the quick-sighted Dragon to him; and the chattering Magpye was also consecrated to him, because Wine makes Persons prate. Before his Expedition to *India* it is reported, that Men were sacrificed to him, but after that he was content with other Sacrifices; they offering to him also Asses and Goats, to intimate that those that are given to Wine make themselves *sottish* as *Asses*, or as *lascivious* as *Goats*. The Sacrifices were usually performed to *Bacchus* in the Evening, and at Night; the Reason of which Custom seems to be, that he (as it is reported) carried a Torch before *Proserpina*, when she was conducted to be married to *Pluto*.

His Priests were either Satyrs or Women, because Women are said to have follow'd him in great Companies to his Travels, crying, singing and dancing continually, and they were called *Bacchanales*, that express Fury and Madness.

The greatest Solemnities observed to *Bacchus*, were the *Orgia* [of ὀργὴ, Gr. a Transport of Anger] because their frantick Women used to cloath themselves with Skins of Tigers or Panthers, and run up and down the Mountains with lighted Torches in their Hands, their Hair hanging down about their Shoulders, shouting out, *Eu Hoe, Evan, Eu Hoe, Bacche*, which signifies good Son.

This Name is said to have been given by his Father *Jupiter*, because in the War with the *Giants*, he, in the Form of a Lion, ran violently upon the first and tore him to Pieces.

The Truth of the Poets *Bacchus* is said to be this. He whom the *Latins* call *Liber*, and the *Greeks Dionysius*, and the *Egyptians Osiris*, was a King of *Nisa* in *Arabia Felix*, who taught the People of that, and the neighbouring Countries, the Way of ordering Vines, and preserving Bees, and several other useful Arts, made several good Laws, persuaded the People to do Sacrifice to their Gods, for which he was greatly honoured by several civiliz'd Nations. In Honour of him, the *Greeks* instituted several Festival Days, of which the Chief was the *Trieteria*, *Apaturia*, *Phallica* and *Lenæa*, in the Beginning of the Spring, that he might bless the Vines.

The *Romans* also instituted the *Ascolia* (which see) in Honour of *Bacchus*, at that Time they carried the Statues. The Ancients also painted *Bacchus* with short brown curled Hair, with a Leopard's Skin spotted, or in a green Mantle, with a red flushing, full Face, and a Wreath of Vine Branches about his Temples.

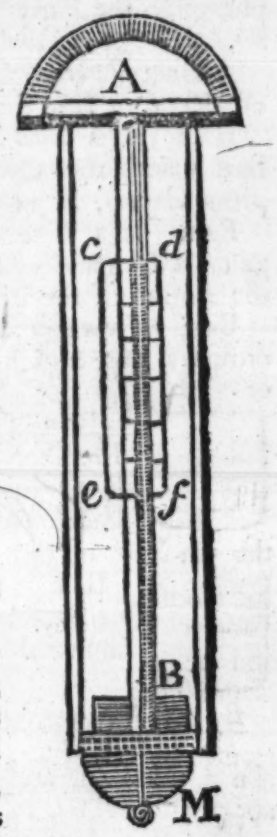
BARO'METER [βαρόμετρον, of βάρος heavy, and μέτρον, *Gr.* Meaſure] an Inſtrument for eſtimating the Weight or Pillar of the Atmoſphere, and the ſeveral minute Variations of the Weight of that Pillar; by which Variations the various Changes of the Weather are determined.



The firſt Inventor of it was *Torricelli*, at *Florence*, in 1643. from whence Father *Merſenne* brought it into *France* the Year following, 1644. and *Monſieur Paſcal* tried it in 1646. and gave an account of it in a Piece printed in 1647; the Uſes of this Inſtrument are to diſcover the Gravitation of the incumbent Atmoſphere (one of the nobleſt philoſophical Diſcoveries) the Changes of the Weather, *&c.*

The Mechaniſm of the Barometer is as follows: A Glaſs Tube A B, hermetically ſeal'd in A, having its Diameter about $\frac{1}{10}$ of an Inch, and its Length at leaſt thirteen Inches, is filled with Mercury ſo juſtly, as not to have any Air over it, nor any Bubbles adhering to the Sides of the Tube, which is beſt done by means of a Glaſs Funnel, with a Capillary Tube; the Orifice of the Tube, filled after this manner, ſo as to overflow, is cloſely preſſed by the Finger, ſo as to exclude any Air betwixt it and the Mercury, and thus immerged in a wooden Veſſel of a convenient Diameter, ſo, however as not to touch the bottom: at the diſtance 28 Inches from the Surface of the Mercury, are fix'd two Plates, CE, and DF, divided into two Inches, and theſe again ſubdivided into any Number of ſmaller Parts: Laſtly, the Tube is incloſed in a wooden Frame, to prevent its being broke, and the Baſon open, though ſecured from Duſt.

Many Attempts have been made to render the Changes in the Barometer more ſenſible, and ſo to meaſure the Atmoſphere more accurately; which has given Riſe to a great Number of Barometers of different Structures. Hence comes the Wheel Barometer, Diagonal Barometer, Horizontical Barometer, Pendant Barometer, *&c.*

A Marine BAROMETER being only a double Thermometer for Conveniency at Sea. *See* Thermometer.

Obſervations for the Uſe of the *Barometer.*

1. The Motion of the Mercury in the Tube does not exceed 3 Inches in its riſing and falling.

2. The riſing of the Mercury generally preſages fair Weather, and its falling foul; as *Rain*, *Snow*, *high Winds* and *Storms.*

3. The falling of the Mercury in very hot Weather preſages Thunder.

4. The

4. The rising of the Mercury in Winter, fore shews Frost; and if the Mercury falls 3 or 4 Divisions in frosty Weather, a Thaw will certainly follow; but if the Mercury rises in a continued Frost, Snow will follow.

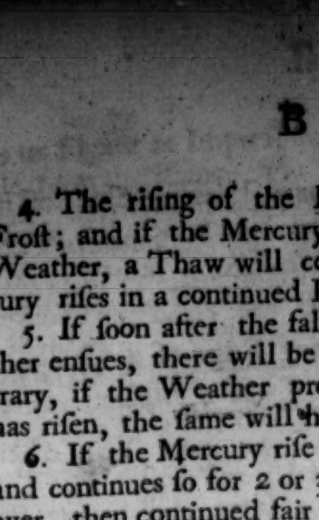
5. If soon after the falling of the Mercury foul Weather ensues, there will be but little of it; and on the contrary, if the Weather proves fair soon after the Mercury has risen, the same will happen.

6. If the Mercury rise much and high in foul Weather, and continues so for 2 or 3 days before the foul Weather is over, then continued fair Weather will ensue.

7. If the Mercury falls much and low in fair Weather, and continues so for 2 or 3 days before the Rain comes, then you may expect a great deal of wet, and very probably high Winds.

8. If the Mercury be unsettled in its Motion, it denotes uncertain and changeable Weather.

9. As to the Words that are graved near the Divisions of the Instrument, though for the most part the Alterations of the Weather will agree with them, yet they are not so strictly to be minded, as in the rising and falling of the Mercury according to the foregoing Observations; for if the Mercury stands at much Rain, and then rises up to Changeable, it then fore shews fair Weather, although not to continue so long as it would have done if the Mercury were higher; so Places which are more Northerly have a greater Alteration of the Rise or Fall of the Mercury, than those that are more Southerly.



Wheel BAROMETER is a Contrivance for the applying an Index to the common Barometer, which Index shews the Variation of the Altitude of the Mercurial Cylinder, which at most does not exceed 3 Inches, which nevertheless may be made as distinguishable as if it were 3 Foot or 3 Yards, or as much more as is desired; the Form of it is as here described.

They were had in great reverence by the people, living for the moſt part auſtere and ſolitary lives, in caves and deſerts, feeding upon herbs, being poorly apparelled, and for a time abſtaining from all carnal pleaſures; their opinions were, that the God *Achari* or *Wiſtnu* created the world by the adminiſtration of three perfect beings, whom he had firſt made for that deſign: theſe three are *Bramba*, *i. e.* penetration, by this he created the univerſe; by *Breſchen*, i. e. exiſting in all things, he preſerves it; and by *Mehaddia*, i. e. the great Lord, he will deſtroy it. They pretend to have received four books from *Bramba*, in which books all knowledge is comprehended, and they hold the *Metempſychoſis* or tranſmigration of ſouls, thro' ſeveral human bodies and beaſts, before they can arrive at pleaſure, and being purely ſpiritual; and for this reaſon they teach, that it is not lawful to kill, and eat any thing that is killed, and none of their tribes do eat any, but their ſoldiers; they alſo hold the fleſh of cows and peacocks as ſacred, and therefore they abſtain from it, and build hoſpitals for lame and decayed beaſts, and buy birds of the *Mahometans* to ſet them at liberty. By their auſtere lives, great faſtings, teaching the people, and expounding the myſteries of their religion to them, they have gotten a very great awe over the people, all over the *Indies*, and eſpecially upon the *Malabar* coaſts, and the brides are committed to the *Bramens* to be bleſſed by them, that the marriage may be happy.

BU'RNING *the Dead*. Tho' the cuſtom of burying the dead was the moſt ancient, yet that of burning ſucceeded very early, and is ſaid to have been introduced by *Hercules*. And it appears that burning the dead was uſed by the *Greeks*, in the time of the *Trojan* war.

The Philoſophers were divided in their opinions concerning burning: thoſe who were of opinion, that human bodies were compounded of water, earth or the four elements, were for having them buried or committed to the earth. But *Heraclitus* and his followers, imagining fire to be the firſt principle of all things, eſteemed burning as the moſt proper; for every one thought it the moſt reaſonable method, and the moſt agreeable to Nature, ſo to diſpoſe of bodies, as they might ſooneſt be reduced to their firſt principles.

Euſtathius aſſigned two reaſons why burning came to be of ſo general uſe in *Greece*. The firſt is, becauſe bodies were thought to be unclean after the departure of the ſoul, and therefore were purified by fire; and the ſecond, that the ſoul, being ſeparated from the groſs unactive matter, might be at liberty to take its flight to the heavenly manſions. The manner of burning the bodies was thus; the body was placed upon the top of the pile, but was rarely burnt without company; for beſides the various animals they threw upon the pile, perſons of quality were ſeldom burnt without a number of ſlaves or captives; they alſo poured into the fire all ſorts of precious ointments and perfumes; and they alſo covered the body with the fat of beaſts, that it might conſume the ſooner; for it was looked upon as a ſingular bleſſing to be quickly reduced to aſhes.

It was alſo the cuſtom to throw into the fire the arms of thoſe that were ſoldiers, and the garments that the deceaſed had worn while living; and the *Athenians* were very profuſe, in ſo much that ſome of their law-givers were forced to reſtrain them by ſevere penalties from defrauding the living by their liberality to the dead. The funeral pile was commonly lighted by ſome of the deceaſed's neareſt relations, who made prayers and vows to the winds to aſſiſt the flame, that the body might quickly be reduced to aſhes.

At the funerals of generals and great officers, the ſoldiers with the reſt of the company made a ſolemn proceſſion three times round the pile, to expreſs their reſpect to the deceaſed; during the time the pile was burning, the friends of the deceaſed perſon ſtood by pouring forth libations of wine, and calling upon the deceaſed. When the pile had burnt down, and the flame had ceaſed, they extinguiſhed the remains of the fire with wine, which having done, they collected the bones and aſhes. The bones were ſometimes waſh'd with wine and anointed with oil.

To

To diſtinguiſh the reliques of the body from thoſe of the beaſts and men burnt with it, this was done by placing the body of the perſon in the middle of the pile; whereas the men and the beaſts burnt with it, lay on the ſides. Theſe bones and aſhes thus collected, they put into urns, made either of wood, ſtone, earth, ſilver or gold, according to the quality of the perſon deceaſed.

BURNING *of Women*, it was the cuſtom of the ancient *Brittains*, that when any great man died [if there was any occaſion to be ſuſpicious as to the manner of his death] his relations made enquiry among his wives concerning it, and if any of them were found guilty they were puniſhed with fire and other torments.

BURNING [with *Philoſophers*] is defined to be the action of fire upon ſome *pabulum* or fuel, whereby the minute or very ſmall parts of it are torn from each other, put into a violent motion, and aſſuming the nature of fire itſelf, fly off *in orbem*, &c.

Before *Calumny* was painted *Envy*, with a pale countenance and ſquinting eyes, which ſerv'd to ſet off *Calumny*, and make her appear the more acceptable. After her comes *Repentance*, repreſented by the figure of a lady in a mourning habit, with her garments rent, and turning her head towards a figure reſembling *Truth*, weeping for ſorrow and ſhame.

This picture *Apelles* gave to *Ptolemy*, and it was eſteemed the beſt piece in the whole world.

The moral of this picture is, that *Calumny* worries and afflicts *Innocence*, which by means of a fooliſh or malicious *Credulity*, proceeding from *Ignorance* or *Suſpicion* is received. The *Calumniator* dreſſes up, and orders all things by the aſſiſtance of *Impoſture*, and by flattery inſinuates himſelf into the good opinion of the hearer; but *Truth* appearing ſooner or later, diſcovers the malice of the *Falſhood*, and ſo there is nothing left to *Calumny* for her labour, but a bitter repentance.

CAPITAL [in *Architecture*] is a principal and eſſential part of an Order of Column or Pilaſter; and is different in different Orders, and is that which chiefly diſtinguiſhes and characteriſes the Orders.

The *Corinthian* CAPITAL, is much the richeſt, it has no *Ovolo*, and its *Abacus* is very different from thoſe of the *Dorick*, *Ionick* and *Tuſcan*. It has its faces circular hollowed inwards, having a roſe in the middle of each ſweep. It has only a brim, and a vaſe inſtead of an Ovolo and Annulets; the neck being much lengthen'd and inrich'd with a double row of eight leaves in each, bending their heads downwards, ſmall ſtalks ariſing between, from whence the Volutes ſpring; but they reſemble not thoſe of the *Ionick* Capital, which are 16 in this inſtead of 4 in the *Ionic*, on each ſide 4 under the 4 horns of the *Abacus*, where the 4 Volutes meet in a ſmall leaf, which turns backwards towards the corner of the *Abacus*. Theſe leaves are divided each making three ranges of leſſer leaves, whereof they are compoſed; again each leſſer leaf is ſometimes parted into three called Laurel leaves, but generally into 5 called Olive leaves. The middle leaf, which bends down, is parted into eleven. In the middle over the leaves is a flower, ſhooting out between the Stems and Volutes, like the roſe in the *Abacus*. The height of this Capital is 2 $\frac{2}{3}$ modules, and its Projecture 1 $\frac{2}{8}$.

The Tuſcan CAPITAL, is the moſt ſimple and unadorned. Its members or parts are no more than three; an *Abacus*, and under this an *Ovolo* or Quarter-round, and under that a Neck or *Collarine*.

Compoſite CAPITAL, take its name from its being compoſed of members borrowed from the capitals of other columns. See *Plate Architecture*.

From the *Dorick*, it takes a Quarter-round or *Ovolo*; from the *Ionick*, an Aſtragal under this, together with Volutes or ſcrolls; from the *Corinthian*, a double row of leaves, and in moſt other things reſembles the *Corinthian*, generally conſiſting of the ſame members and the ſame proportion.

There is a flower in the middle of the *Abacus*, and leaves which run upwards under the horns, as in the *Corinthian*. It has flowers inſtead of ſtalks in the *Corinthian*, lying cloſe to the vaſe or bell, which twiſt themſelves round towards the middle of the face of the Capital. The height of this Capital is two modules $\frac{1}{3}$, and its Projecture one module $\frac{2}{3}$, as in the *Corinthian*. See *Plate Architecture*.

The *Dorick* CAPITAL, beſides an *Abacus* and an *Ovolo*, and a neck in common with the *Tuſcan*, has three annulets or little ſquare members underneath the *Ovolo*, inſtead of the Aſtragal in the *Tuſcan*, and over the *Abacus*, a Talon, Cima or Ogee with a fillet. The height of this Capital is one module, and its Projecture 37 minutes and half. See *Plate Architecture*.

The *Ionick* CAPITAL, is compoſed of three parts, an *Abacus* which conſiſts of an Ogee and a Fillet; and under this a rind which produces the Volutes or Scrolls, which is the moſt eſſential part of this Capital. The Aſtragal, which is under that Ovolo, belongs to the ſhaft, and the middle part is called a rind or bark, becauſe of its bearing ſome reſemblance to the bark of a tree laid on a vaſe, the brim of which is repreſented by the Ovolo, and ſeems to have been ſhrunk up in drying, and to have twiſted into the Volutes; the Ovolo is adorned with eggs ſo called from their oval form. The height of this Capital ſome reckon 18 minutes, its Projecture one module $\frac{7}{10}$.

CA'STOR and *Pollux* [according to the *Poets*] were the offspring of *Jupiter* and *Leda*, queen of *Tyndarus*, king of *Oebalia*, in the manner following. *Jupiter* having had an intimate familiarity with *Leda*, ſhe brought forth two large eggs, of that which was of *Jupiter* came *Pollux* and *Helena*, and from that which was of *Tindarus* proceeded *Caſtor* and *Clytemneſtra*.

The two brothers, *Caſtor* and *Pollux*, had ſuch an entire love one for the other, that they always perform'd their undertakings together, and were, as it were, inſeparable; tho' *Pollux* only was immortal by the privilege of his birth, as proceeding from *Jupiter*: but *Pollux* having ſo intire a love for his brother *Caſtor*, he prevailed upon *Jupiter* to admit him into the number of his ſons. And *Jupiter* made *Caſtor* partaker of immortality with *Pollux*, ſo that they were both to live ſucceſſively one after another, till the time that they were both tranſlated to the ſigns of the Zodiack, where they repreſent the conſtellation call'd *Gemini*.

But they did not attain this honour before they had merited it by many glorious actions; for *Theſeus* having carried away their ſiſter *Helena*, they forced him to reſtore her, and clear'd the coaſt of all the pirates that infeſted the ſea: and for this reaſon they were accounted and adored among the deities of the ſea; and the *Heathens* ſacrificed unto them white lambs.

The *Romans* imagining that they received aſſiſtance from them in the battle againſt the *Latins*, near the lake *Regillus*, therefore built them a ſtately temple; and commonly ſwore by their names. The oath that women ſwore was *Ædcaſtor*, i. e. *Ædes Caſtoris*, the temple of *Caſtor*; and the mens oath was *Ædepol*, i. e. *Ædes Pollucis*, the temple of *Pollux*.

The *Locrenſes* affirm'd, that they ſaw them leading their army againſt the *Crotonians*, riding upon white horſes, with caps on their heads, and lances in their hands: and from this they are thus repreſented in painting and ſculpture.

Homer relates, that *Caſtor* and *Pollux* were companions with *Jaſon*, in fetching back the golden fleece, in which expedition they ſhew'd their courage and skill in arms: and that being overtaken by a violent tempeſt in the voyage, they ſaw two flames of fire lighting on the heads of *Caſtor* and *Pollux*, which proved to be happy omens or fore-tokens of their ſafety. And hence came the ancient cuſtom of mariners, that when meteors, or the dry exhalations of the earth, being inflamed in the air, appeared about their ſhips in a ſtorm, they call'd them *Caſtor* and *Pollux* when two fires or lights appear; and *Helena*, when but one: and when there are two fires appear at ſea together, they prognoſticate and expect ſafety, and an enſuing calm; but if but one, they prepare themſelves for the Extremity of a violent ſtorm; ſuppoſing *Helena* as dangerous to ſailors, as ſhe was to *Troy*.

Partial CAUSE, is that which concurs with ſome other in producing the Effect, the father and mother of a child; becauſe both the one and the other were neceſſarily concerned in the generation of it.

Ceres and *Veſta*. They ſeem to be no other than the earth itſelf; for the ancients call'd her Ἑστίαν, i. e. *Veſta*, διὰ τὸ ἑστάναι, *i. e.* becauſe it ſtands; or becauſe the univerſal world leans and bears upon it, as on a certain foundation.

And in as much as ſhe is ſaid to produce corn, ſhe very properly bears a garland, heavy with ears of corn.

Triptolemus, of *Eleuſina*, is ſtoried to have ſown bread-corn all over the orb of the earth, at the time he was carried in *Ceres*'s chariot, which was drawn by flying dragons: for this man was the firſt of the ancients that took a ſurvey of all things; and God having endowed him with a large ſhare of knowledge, he came at laſt to underſtand how barley was to be managed, how ſeparated from the chaff and to be beaten or ground.

Eleuſis was a place where the uſe of barley was firſt found out, and *Ceres* taking her name from the place, was called *Eleuſinia*.

Pluto is ſaid to have ſtolen away *Proſerpina*, the daughter of *Ceres*. The foundation of this fiction is, that the ſeeds of bread-corn are for ſome time hid in the earth. In the ſpring time they ſacrifice to her a turf and the graſs, with much mirth and rejoycing, ſeeing all things to grow green, and to afford great hopes of fertility. CHA'RON [according to the *Poets*] was the ſon of *Erebus* and the night; and the ferry-man of *Pluto*, to convey the ſouls of the deceaſed to him.

Charon is ſtoried to be covetous of money, and therefore would carry none over without a piece of ſilver, which the ghoſts were wont to carry between their lips. And altho' it was not granted, that any who were not dead or unburied, ſhould be admitted into *Charon*'s boat; yet *Æneas*, for his piety, and *Hercules* and *Theſeus* by their valour, and *Orpheus* by his muſick, obtained the privilege to paſs to and fro in it.

The original of this fable is ſuppoſed to be this; *Oſiris*, king of *Egypt*, was one who took extraordinary care of the dead, cauſing them to be buried in ſeveral places, made on purpoſe near *Memphis*, to encourage virtue and a good life; for perſons were appointed to enquire into every

man's actions; and if the deceaſed had not lived well, he was to be caſt into a place of ſhame and puniſhment; but if he had liv'd virtuouſly, he was to be interr'd in pleaſant fields, beautified and flouriſhing with all manner of flowers. And by this means *Oſiris* did awe his ſubjects into a ſubmiſſion and obedience to his laws.

This place was near the city *Memphis* in *Egypt*, and encompaſſed ſeveral times with the river *Nile*: Hence the poets take their four rivers of hell, *Acheron*, *Styx*, *Cocytus* and *Phlegethon*.

An old fellow uſed to convey the dead bodies over theſe four compaſſings of the *Nile*; and hence comes the poets *Charon*.

The heathens did believe that *Charon* would never ſuffer the ſouls whoſe bodies had lain long unburied, to paſs in his boat to reſt in the *Elyſian Fields*; but that they were toſſed up and down during the ſpace of 100 years, upon the banks of the river *Acheron*.

Therefore it was looked upon a cruelty beyond expreſſion, to deny burial to the dead; and therefore all great commanders were very careful after a battle to interr the bodies of their ſoldiers that had been ſlain.

CLOUDS [whence they take their name is not certainly determined; *Somnerus* derives them of clu͡ð, *Sax.* a lump or clod, *q. d.* clodded vapours; but *Minſhew* of *claudere*, L. to ſhut up, becauſe they ſhut up the ſun from us.] It is a queſtion among philoſophers, whether clouds or thick fogs are compound alike, or whether there is ſomething more in the clouds than there is in the thick fogs: Some are of opinion, that the clouds are groſſer than all fogs, and that they are compoſed of flakes of ſnow, rather than particles of water, ſuch as fogs are made of. Others again are of opinion, that the clouds are only a cloſer ſort of fogs. And indeed thoſe fogs that hang upon the tops of very high hills, appear to people that are on plains to be all one with the clouds; tho' thoſe that are at them perceive nothing but a thick fog. Clouds then are formed of vapours raiſed from water or moiſture, or thoſe exhalations that aſcend from the earth, and are no other than ſmall bubbles detach'd from the waters by the power of the ſolar or ſubterraneous heat, or both. And being lighter than the atmoſphere, are buoy'd up thereby till they become of an equal weight therewith in ſome of its regions aloft in the air, or nearer to the earth.

The clouds then are higher than fogs, and hang in the air, and are carried about in it by the winds. They are alſo of various figures; ſometimes ſo thin, that the ſun's rays paſs through them; they alſo appear of ſeveral colours, as white, red, &c. and alſo ſometimes of very dark colours.

As to their hanging in the air, it ſeems a matter of ſome difficulty to account for that; becauſe all watery particles, of which clouds conſiſt, are heavier than air, ſo that were there nothing to hinder, they would fall to the earth. But there are two things that are ſuppoſed to bear them up. The firſt is the winds, which blow from all parts under the region of the clouds, and do with them bear about many lighter ſorts of bodies; eſpecially if thoſe bodies contain but a ſmall quantity of ſolid matter under a broad ſuperficies. Thus it is commonly ſeen how eaſily boys paper-kites are kept up by the wind when they are mounted pretty high, and in like manner the particles of water very much rarefied may eaſily be ſuſpended at that height. 2dly, There are new exhalations and vapours perpetually fuming out of the earth, and by their motion upwards hinder the clouds from falling or deſcending, unleſs the denſity of the clouds preponderates. And ſo we ſee, that the vapour of the fire carries lighter bodies up the chimney; nay, the ſmoke of a fire in a chimney is able to turn a thin plate of iron, that is artfully placed in it, ſo ſtrongly, as to turn about a ſpit and roaſt a piece of meat of a conſiderable weight.

As

As to the colours of the clouds they are varied according to the ſituation of the ſun, and way of reflecting its light in reſpect to us. The denſity of the clouds proceeds from the cloſeneſs of the vaporous particles one to another, and their thinneſs from the diſtance of thoſe particles one from another, of which there are ſeveral cauſes. When they are very thin, they leave ſo many interſtices, that the rays of the ſun dart thro' them in many places, but are intercepted in others.

As to the figures or forms of the clouds, all their variety ariſes from their plenty of vapours, and the influence of the ſun and wind. For it is impoſſible for them to be variouſly condenſed, rarefied and carried about in the air, and their figures not to be changed.

Clouds are ſuſpended in the air, becauſe they conſiſt of water rarefied by the heat of the ſun into ſteam, which ſteam being lighter than air is carried up by it into the colder regions, where it is again condenſed into water, and from that into ice and ſnow, which becoming too heavy for the air to ſupport, breaks into pieces, and deſcends by their ſuperior weight.

And clouds ſwim in the air as ſhips at ſea; for the air being thicker near the earth, and the particles of a cloud but thin, they are eaſily born up; but, according to the greater or leſſer weight of a cloud, and the ſetting of the wind, it ſinks or riſes.

When the particles of the clouds are ſo thick that they can no longer be kept up by the reſiſtance of the air, then are they condenſed into water and fall down in rain. See *Condenſation* and *Vapour*.

CODE [among *Lawyers*] a certain book or volume of the ancient *Roman* law. In old time, the pleas and anſwers of the lawyers were in looſe ſcrolls or ſheets of parchment or paper. Theſe the Emperour *Juſtinian* having collected and compiled into a book, called it *Codex*, and ever ſince, this book by way of eminence has been called the *Code*, and is accounted the ſecond volume of the *Roman* civil law, and contains 12 books.

The matter of it, eſpecially as to the firſt 8 books, is pretty near the ſame with the *Digeſts*; but in theſe things it differs, firſt, as to the ſtile, which is not ſo pure; 2. Its method is not ſo accurate as that of the *Digeſt*. 3dly, In that it diſcuſſes matters of more common uſe; whereas the more abſtruſe and ſubtle queſtions of the law are diſcuſs'd in the *Digeſts*, and there are the opinions of the ancient lawyers upon them, and ſo contains more polite, fine, witty arguing, than of uſe to the generality of mankind.

And for this reaſon *Juſtinian* compos'd the code, becauſe he found the *Digeſt* in many places too fine and ſubtle for common uſe, and alſo very defective and imperfect as not deciding many caſes that did daily occur.

This *Code* was compiled from the anſwers and determinations of 56 Emperors and their councils, many of which were learned and skilful lawyers, as the famous *Papinianus* and ſome others, from the time of the Emperor *Adrian* to *Juſtinian*'s own time. And in this *Code* there are abundance of things fully and diſtinctly determined which before were either omitted or too briefly handled.

The Theodoſian CODE, is of good uſe to explain the other *Code*, which cannot well be underſtood without it. This was held in great eſteem, and was uſed in the *Weſtern* parts of *Europe* for ſeveral hundred years, as Mr. *Selden* relates, after that law was in a manner diſuſed and forgotten; but now the *Theodoſian Code* is alſo grown much out of uſe.

CO'MEDY [of κώμη a village and ᾠδὴ a ſong; becauſe comedies were firſt acted in country villages] is an agreeable repreſentation of the actions of human life. It is reckoned part of the great poetry on account of its end, which is inſtruction as well as pleaſure. For men will ſooner be laugh'd out of their follies than beat out of them; and therefore comedy will arrive at the end of dramatick poetry ſooner than tragedy. The three unities of action, time and place are requiſite in this, and therefore whatever action is compound, whatever time above what is neceſſary for the repreſentation, whatever ſcene is removed from one ſtreet to another, or one houſe to another, break the rules or are againſt nature.

That which diſtinguiſhes our comick poetry from all others, and gives it the advantage over both the ancients and moderns, is humour, which Mr. *Dryden* thus defines. It is the ridiculous extravagance of converſation wherein one man differs from all others.

Some have fancied that the excellence of comedy conſiſts in the wit of it; others confine it to the intrigue, and turns of incidents; and others to the humours. But indeed the excellence lies in the juſt mixture of the whole.

That it contracts its matter or ſubſtance from a ſlimy exhalation, and was not originally in the creation; nor is number'd among natural things, mentioned in the hiſtory of *Geneſis*; but is ſomething preternatural, and is placed with heavenly bodies, becauſe they ſeem to be of their kind. Many are of opinion, that they prognoſticate dreadful and horrible events of things to come; but others hold that they are as much ſtars as any other, and only draw nearer to us at the time they appear, and do not forebode any accidents whatſoever. The figure annexed is azure, a comet, or blazing-ſtar ſtreaming in bend *Or*.

CONSECRATION *of Emperors*, took its original from the Deification of *Romulus*, which *Herodian* deſcribes as follows.

The Emperors, who leave either ſons or deſigned ſucceſſors at their death, are conſecrated after this manner, and are ſaid to be enroll'd among the number of the gods. On this occaſion the whole city maintains a publick grief mixed as it were with the ſolemnity of a feſtival. The true body is buried in a very ſumptuous funeral according to the ordinary method. But they take care to have an image of the emperor made in wax done to the life, and this they expoſe to publick view, juſt at the entrance of the palace gate, on a ſtately bed of ivory, covered with rich garments of embroidered work and cloth of gold. The image lies there all pale, as if under a dangerous indiſpoſition, the whole ſenate dreſs'd in black ſit the greateſt part of the day round the bed on the left hand, and the aged matrons,

matrons, who either on account of their parents or husbands are reputed noble, on the right hand. They wear no jewels, or gold, or other ornaments; but are attired in close white vests. This ceremony continues seven days together, the *Physicians* being admitted every day to the bed-side, and declaring the patient continually to grow worse and worse. At last, when they suppose him to be dead, a select company of young gentlemen of the senatorian order take up the bed upon their shoulders, and carry it through the *via sacra*, or the holy way, into the old *Forum*, the place where the *Roman* magistrates are us'd to lay down their offices. On both sides there are raised galleries, with seats one above another, one side being fill'd with boys nobly descended, and of the most eminent patrician families; the other with a like set of ladies of quality; who both together sing hymns and Pæans compos'd in very mournful and passionate airs, to the praise of the deceased. When these are over, they take up the bed again and carry it into the *Campus Martius*, where in the widest part of the field is erected a four-square pile, intirely compos'd of large planks in shape of a pavilion, and exactly regular and equal in dimensions. This in the inside is filled with dry chips, but without is adorned with coverlids of cloth of gold, and beautified with pictures and curious figures in ivory. Above this is placed another frame of wood, less, but set off with the like ornaments with little portico's. Over this is placed a third and fourth pile, each less than that whereon it stands; and so others perhaps till they come to the least of all, which forms the top. The figure of the structure taken all together may be compar'd to those watch-towers, which are to be seen in harbours of note, and by the fire on their top direct the course of ships into the haven. After this, hoisting up the body into the second frame of building, they get together a vast quantity of all manner of sweet odours and perfumes, whether of fruits, herbs or gums, and pour them in heaps all about it: there being no nation, city, or indeed any eminent men, who do not rival one another in paying these last presents to their prince. When the place is quite filled with a huge pile of spices and drugs, the whole order of knights ride in a solemn procession round the structure, and imitate the motions of the *Pyrrhic* dance. Chariots too in a very regular and decent manner are drove round the pile, the drivers being clothed in purple, and bearing the images of all the illustrious *Romans* renowned either for their councils, or administration at home, or their memorable atchievements in war. The pomp being finished, the successor takes a torch in his hand and puts it to the frame, and at the same time the whole company assist in lighting it in several places; when on a sudden the chips and drugs catching fire, the whole pile is quickly consumed. At last from the highest and smallest frame of wood an eagle is let loose, which, ascending with the flames towards the sky, is supposed to carry the prince's soul to heaven.

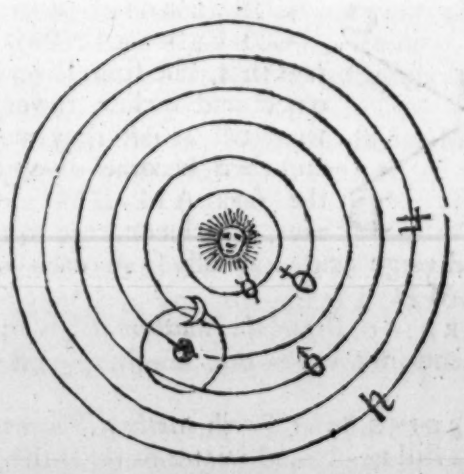
COPE'RNICAN *Syſtem* [ſo called of *Nicholas Copernicus* the inventor or rather reviver of it] is a ſyſtem of the world, wherein the ſun is ſuppoſed at reſt, and the planets with the earth to deſcribe ellipſes round him. The heavens and ſtars are here ſuppoſed at reſt; and that diurnal motion they ſeem to us to have from *eaſt* to *weſt* is reputed to be the earth's motion from *weſt* to *eaſt.* It is deſcribed thus,



The ſun being found to be a body more than 300 times bigger than our earth, it ſeemed prepoſterous that ſo mighty a body of fire, ſhould whirl round ſo large a circle as his ſphere, according to the *Ptolemaick* ſyſtem, in ſo ſhort a time as 24 hours (when according to its computed diſtance, he muſt move 7570 miles in a minute.) It was therefore more reaſonable to believe that the earth was ſeated in the ſphere, that *Ptolemy* had placed the ſun in, and that the ſun was placed in the center; for by that means, if the earth but turn round upon its own axis in 24 hours, every ſide of it is turned to the ſun, and conſequently a day and a night is afforded to all its inhabitants, without the neceſſity of the ſun's or earth's making ſo vaſt a journey as the circle of its ſphere requires. He therefore placed the ſun in the centre, with no other motion than turning round upon its own axis, which it performs in 27 days and a half. He alſo ſuppoſes the ſun to be ſurrounded with a vaſt ſpace of *Æther* of many millions of

miles

miles extent, which is called its *vortex*, which *Æther* is carried round with the ſun; and becauſe the planets float in it, they alſo are carried in a continual circuit from *weſt* to *eaſt* round the ſun in certain periodical times, according to their nearneſs or diſtance from the ſun. The earth is one of theſe planets, and has another attending her, *viz.* the moon; for that planet belongs to us only, being in a continual circuit round this earth, and with it carried on in the annual circuit that the earth makes round the ſun. The uſe of it being to reflect the ſun-beams to us at ſuch times as he is gone from us. The other planets have the like concomitants. *Jupiter* has four, and *Saturn* five, as is ſuppoſed for the ſame reaſon; and becauſe thoſe planets are ſo much farther diſtant from the ſun than we are, they have, of conſequence, occaſion for more moons than we have. It is certain, by ocular demonſtration, that there are four little planets called *Satellites*, which are in continual circuit round about *Jupiter*, that are ſo regular in their motions, that the eclipſes of them are calculated, and thereby a great help found out to the correcting of the maps. See the above ſcheme.

Being accuſed for the death of *Perdix*, his nephew, he fled into *Crete*, and there made a labyrinth for *Minos*, into which *Minos* put him and his ſon *Icarus*, as the Poets ſay, for making a cow of wood, into which *Paſiphae* being put, was lain with by a bull; ſee *Paſiphae*. The grounds of which fable is, *Dædalus* was privy to the adultery of *Paſiphae* the wife of *Minos* with his ſervant *Taurus*. They tell us likewiſe, that being priſoner in the labyrinth, he deſired to have feathers and wax, in order to make a curious preſent for the king; but with them made wings for himſelf and his ſon *Icarus*, and flew away out of priſon, and got away by ſhip from *Crete* to *Sardinia*, and from thence to *Cuma*, where he built a temple for *Apollo*; but his ſon *Icarus* ſoared ſo high, that the beams of the ſun melted the wax, and ſo he fell into the *Icarian* Sea. The moral of which is, that he eſcaped with ſome diſcontented perſons from *Crete* in ſhips, and *Minos* purſuing them hard, *Icarus*'s ſhip was ſplit upon a rock, but *Dædalus* overſailed the king, and arrived ſafe in *Sicily*, ſailing ſwifter becauſe he had then invented ſail-cloths, whereas none before him knew any ſpeedier way of ſailing than by the help of oars.

The Poets tell us, that *Dædalus* made walking ſtatues; but the truth of the fable is, the carvers and ſtatuaries of that time made their ſtatues with their feet in a ſtanding poſture; but *Dædalus* made his ſtatues with one of the feet extended and before the other, as in a walking poſture.

DA'MPNESS }

DAMP [ᵹamp, *Dan.*] moiſture, wetneſs; alſo a vapour that frequently ariſes in mines under ground, and ſometimes choaks the workmen, unleſs they get away quickly.

To DAMP [ᵹamper, *Dan.*] to make damp or moiſt; alſo to put a damp upon or diſhearten; alſo to allay, to chill.

DAMPS [in *Mines*] are noxious exhalations, which ſometimes ſuffocate thoſe that work in them, and are otherwiſe prejudicial, they are diſtinguiſhed into 4 ſorts.

1. *The Peas-Bloom* DAMP [at the mines at the *Peak* in *Derbyſhire*] this damp is ſuppoſed to proceed from the multitude of the red trefoil flowers, called hony-ſuckles, with which the lime-ſtone meadows there do abound. It takes its name from the likeneſs to the ſmell of peas-bloſſoms. It is ſaid always to come in the ſummer-time, but is not mortal.

2. *The fulminating* DAMPS, theſe are found frequently in coal-mines, but very ſeldom, if at all, in lead-mines. If the vapour of theſe ſort of damps is touched by the flame of a candle, it immediately catches fire, and has all the effects of lightening or fired gun-powder.

3. *The Common* DAMPS, affect perſons with ſhortneſs of breath and difficulty of breathing; but are ſeldom injurious any farther, if the perſons affected with it do not ſwoon, which if they do, though they are not quite ſuffocated, are yet tormented with very violent convulſions on their recovery. The coming of theſe ſort of damps are known by the flame of the candles becoming round, and growing leſſer and leſſer till it go quite out. The method of curing thoſe that ſwoon, is by laying them on their bellies with their mouth to a hole dug in the ground, and if that does not recover them, they fill them full of ale, and if that fails, they look upon their caſe deſperate.

4. *The Globe* DAMP, this by miners is ſuppoſed to gather from the ſtream of their bodies and the candles, which aſcending up into the higheſt part of the vault, does there condenſe, and in time a film grows over it, which corrupts and becomes peſtilential. It appears of a round form about the bigneſs of a foot-ball, hanging in the higheſt part of the roof, of ſuch paſſages of the mine, as branch out from the main grove. It is covered with a skin about the thickneſs of a cobweb. If this skin be broken by a ſplinter or any other accident, the damp preſently flies out and ſuffocates all that are near it, the workmen have a way of breaking it at a diſtance by the help of a ſtick and a long rope, which being done, they afterwards purify the place with fire.
